Introduction

Why do we study Industrial Organization

- Industrial Organization has been one of the hottest fields in Economics since three decades ago. Many outstanding economists have devoted themselves into this filed.
  - One of the best (and probably the most talented) economists, Jean Tirole, wrote a book *The Theory of Industrial Organization*.
- IO is a very interesting subject, sometimes you feel like you are setting up a game, and then play the game yourself.
- IO is very practical as well, with IO we can explain many things in our daily life.

- Industrial Organization has been one of the hottest fields in Economics since three decades ago. Many outstanding economists have devoted themselves into this filed.
  - One of the best (and probably the most talented) economists, Jean Tirole, wrote a book *The Theory of Industrial Organization*.
- IO is a very interesting subject, sometimes you feel like you are setting up a game, and then play the game yourself.
- IO is very practical as well, with IO we can explain many things in our daily life.
What is IO?

- IO studies the function of markets, strategies of firms. It is a central topic in Microeconomics nowadays.
- Traditional Microeconomics focus more on ideal markets, such as perfect competitive market.
- IO extends the scope of Microeconomics, and focus on non-perfect competitive markets, such as monopoly and oligopoly.
- IO adopts game theory to study strategic interactive among firms.

IO: Application

- Mobile phone market
  - Android V.S. IOS V.S. Windows Phone
  - Samsung V.S. Apple V.S. Nokia

- E-commerce
  - Online retailing market: B2C (eg. Amazon.com), Platform (eg. Ebay.com)
  - Service/content provider (two-sided-market): Google, Facebook, Youtube

- Mixed oligopoly
  - Benefit of privatization
  - Cost of privatization
IO: Application

- **Mobile phone market**
  - Android V.S. IOS V.S. Windows Phone
  - Samsung V.S. Apple V.S. Nokia

- **E-commerce**
  - Online retailing market: B2C (eg. Amazon.com), Platform (eg. Ebay.com)
  - Service/content provider (two-sided-market): Google, Facebook, Youtube

- **Mixed oligopoly**
  - Benefit of privatization
  - Cost of privatization

For short, game theory is a theory studies games. We are not going to study it in a very formal and rigorous way today.

An important concept in game theory is Nash Equilibrium. Movie *A Beautiful Mind* by Russell Crowe.

Nash equilibrium is a state that no player wants to change his/her action unilaterally.

Meet in New York game.
- Times square
- The statue of Liberty
- Empire state building
A brief introduction to game theory

Guessing number

- Each student guesses a number privately.
- We calculate the average $\bar{x}$.
- Winner: the student whose number is closest to the one third of the average, i.e. $\frac{\bar{x}}{3}$.

Dynamic game

Pirates of Caribbean

Five pirates together decide how to divide 100 gold coins.

- Pirates A proposes a plan, if half or more than of pirates disagree with this plan, pirates A is killed, otherwise they divide the golds according to this plan.
- Pirates B then makes a plan, again, if half or more than half of pirates disagree, B got killed; otherwise the rest pirates follow this plan.
- Keep going this way.
- A humanity assumption about pirates, if they can get the gold coins without killing, they prefer not to kill.

Question: What is your plan, if you are pirates A?

Question: What is your plan, if you are pirates A?
A simpler version

Assume there are three pirates (C, D, E) instead of five.

- When only pirate E left, he doesn’t have to make a plan and get all golds.
- When pirate D and E left, what plan will D make?
  - To survive, D needs E to agree with his plan.
  - Give out all golds to E. So D gets 0 and E gets 100.
- When pirate C, D and E left, what plan will C make?
  - C needs at least two pirates (including himself) agree with him.
  - Who can he buy at what price?
  - Give 1 coin to D, and 0 to E, and he takes the rest.
  - D will agree with the plan (otherwise he gets 0), C himself will agree with the plan, then the plan is agreed by majority. They reach a deal.
A simpler version

Assume there are three pirates (C, D, E) instead of five.

- It is a common tool used in IO analysis.
Oligopolistic competition

Basic models studied in Microeconomics.

- Cournot Competition
  - Two identical firms compete in quantity simultaneously.
  - Production costs are normalized to 0.
  - Each firm produces \( \frac{1}{3} \) of the market capacity.

- Bertrand Competition
  - Two identical firms compete in price simultaneously.
  - No fixed cost, marginal costs are constant.
  - Prices are driven down until the marginal cost.

- Stackelberg Competition
  - Two identical firms choose quantities in sequence.
  - First mover advantage.
Oligopolistic competition

Basic models studied in Microeconomics.

- **Cournot Competition**
  - Two identical firms compete in quantity simultaneously.
  - Production costs are normalized to 0.
  - Each firm produces $\frac{1}{3}$ of the market capacity.

  - Prices are driven down until the marginal cost.

- **Stackelberg Competition**
  - Two identical firms choose quantities in sequence.
  - First mover advantage.
Oligopolistic competition

Basic models studied in Microeconomics.

- **Cournot Competition**
  - Two identical firms compete in quantity simultaneously.
  - Production costs are normalized to 0.
  - Each firm produces \( \frac{1}{3} \) of the market capacity.

- **Bertrand Competition**
  - Two identical firms compete in price simultaneously.
  - No fixed cost, marginal costs are constant.
  - Prices are driven down until the marginal cost.

- **Stackelberg Competition**
  - Two identical firms choose quantities in sequence.
  - First mover advantage.
Oligopolistic competition

Basic models studied in Microeconomics.

- **Cournot Competition**
  - Two identical firms compete in quantity simultaneously.
  - Production costs are normalized to 0.
  - Each firm produces $\frac{1}{3}$ of the market capacity.

- **Bertrand Competition**
  - Two identical firms compete in price simultaneously.
  - No fixed cost, marginal costs are constant.

Models with product differentiation

- **Hotelling model**
  - Consumer uniformly distributed on a linear city of length 1.
  - Each consumer has a unit demand regardless of demand.
  - Duopoly supply homogeneous products.
  - Firms choose location first, then price.

- **Circular city model**
  - Consumers uniformly located on a circle.
  - n firms are evenly spread over the circle.
  - Consumers’ transportation cost are linear in distance traveled.

- **Vertically differentiated model**
Models with product differentiation

Application of location model

- If you want to build a shopping mall, what is its best location?
  - Too close to other malls, price competition is severe.
  - Too far away from other malls, no consumer will come.

- What is the optimal size of a outlet mall?
  - Outlet malls are usually in suburb.
  - Problem of a too small size: consumers think it doesn’t worth the trip.
  - Problem of a too large size: price competition among stores is intense.
Application of location model

More interpretation of location

- Location can be treated as product positioning.
  - The taste of a new soft drink: sweet, sour, other flavor, or mixed.
  - Design of a new car: sports car, family car.

- Location model’s application in other area.
  - Presidential campaign: high tax or low tax.
  - Positioning of a city: shopping center, industry center, or tourism city.

Mobile phone market

We focus on the smart phones. Operation system is the basis and key feature of a smart phone.

- Three major operation system
  - Android developed by Google
  - IOS developed by Apple
  - Windows Phone developed by Microsoft

- Android is free and rely on the revenue from advertisers (similar as Google search engine).
- IOS comes with Iphone, not for sell separately.
- Windows Phone charged $15 per copy, and has been free since March 2014.

Mobile phone OS

- **Android**
  - **Pros:** Open system, abundant apps.
  - **Cons:** Safety, high memory (RAM) usage

- **IOS**
  - **Pros:** Cooperates well with hardware, safe, abundant apps
  - **Cons:** Closed system

- **Windows Phone**
  - **Pros:** Does not require high memory, unique design
  - **Cons:** Not enough apps

Question

- Why does Microsoft offer free Windows Phone OS now?
- Why does Galaxy note come with a S-pen?
- Why does Samsung (and other Android Phone) develop Galaxy gear (and Android watch)?
- Why does Iphone offer Iphone 5C?

Question

- Why does Microsoft offer free Windows Phone OS now?
- Why does Galaxy note come with a S-pen?
- Why does Samsung (and other Android Phone) develop Galaxy gear (and Android watch)?
- Why does Iphone offer Iphone 5C?
Answer

- To encourage more mobile phone manufacturer to use Windows Phone OS, and consequently more apps will be developed.
- Differentiate its product from the rest.
- Build a more comprehensive ecosystem.
- Expand product line, compete for medium or low end consumers.

Online market

- Online market has grown very fast in last two decades.
  - It significantly lowers transaction cost.
  - Information acquisition is much easier.
  - Cost of starting a business is much lower online.
  - More and more people prefer to do business online.
  - Example: Ebay, Amazon, Groupon, Craigslist

Advantage and disadvantage of shopping online.
- Prices are usually lower online.
- Easier to get information about price and other consumers reviews.
- One click shopping.
- Buy without feeling the product.
- Scam website.
- Have to wait.
Online market

Online market has grown very fast in last two decades.

Two-sided-market

What is two-sided-market

- The market brings two sides of participants together, each side exert externality on the other.
- Example,
  - Content providers such as magazine, Youtube, etc. brings advertisers and viewers together. Advertisers exert negative externality on viewers but viewers exert positive externality on advertisers. The content provider may charge both sides or one sides only.
  - Ebay, brings buyers and sellers together. Both buyers and sellers exert positive externality on the other side.
  - Example of one-sided-market, Walmart.

Strategies in two-sided-market

- **Platform’s Optimal strategy.**
  - Choose which side to charge fees.
  - Due to the externality, the platform may make profit from only one side. For the other side, they get “free” service.
  - For example, the viewers can view free video stream on Youtube, and advertisers pay for it.
  - Choose optimal rate. Need to consider externality.

- **Viewer’s optimal strategy.**
  - Whether to participate in the platform
  - Should I skip the ads?

- **Advertiser’s optimal strategy.**
  - Number of advertisement
  - Quality of advertisement
Strategies in two-sided-market

National firm

What does a national firm should be?

- Generally, a firm’s purpose is to maximize its owners’ revenue.
- Private firm owned by its share holders, thus maximize its profit to generate largest possible revenue to its owners.
- National firm owned by the country, all citizens of the country. It therefore should maximize revenue to all citizens in the country, that’s social welfare.

What does a national firm actually is?

- Sometimes a government prefers to protect consumers, national firm thus focus more on consumer surplus.
- A more general problem: we can not have all citizens manage a national firm. Agent who manage the firm will maximize his/her own revenue.
- Combined, in practice, national firm maximizes a mixture of social surplus, consumer surplus, and profit.

Comments

- Privatization saves a lot of firms. Many firms used to be at the edge of bankruptcy are now earning high profit.
- Corruption during privatization.
- May hurts previous low level employee.
- Need more supervision and to be more cautious during privatization.

Location model and mixed oligopoly

- In Hotelling model, two firms locate at the two ends of the line.
- Social efficient location is one firm located at $\frac{1}{4}$ and the other at $\frac{3}{4}$.
- When one firm is national firm, we have the efficient outcome (Cremer et al. 1991 IJIO).
- National firm is more aggressive in location choice since it doesn’t care profit.
- When there exists subcontracting between national firm and private firm, existence of national firm can still guarantee the efficient outcome.
- When national firm competes against foreign firm, tariff choice will not affect firms’ location choice.
Location model and mixed oligopoly

- In Hotelling model, two firms locate at the two ends of the line.
